Neha — Job Search & Personal Branding Toolkit

Target Roles: Data Analyst / Data Analytics (Internship & Entry-Level) | Built from resume content only

SECTION 1: ATS-Friendly Cover Letter

Dear Hiring Manager,

I am writing to express my interest in the Data Analyst position at [Company Name]. As a B.Tech Artificial Intelligence & Machine Learning student at Hi-Tech Institute of Engineering and Technology, I bring hands-on experience in data analysis, data manipulation, and data visualization built through academic projects, independent problem-solving, and active contribution to the open-source community — and I am eager to bring that same analytical rigor to your team.

My technical foundation centers on the tools core to modern data analytics: SQL for querying and structuring data, NumPy and Jupyter Notebook for array- and string-based data manipulation, Power BI and MS Excel for reporting and visualization, and Python for building organized, reusable logic through object-oriented programming (Classes, Objects, Inheritance, Polymorphism, Encapsulation, Abstraction). I supplement this with a working knowledge of machine learning concepts, giving me the flexibility to support both descriptive analytics and more advanced data science initiatives as they arise.

Beyond coursework, I have applied these skills in real, self-directed projects. I built *Medicure*, a smart health assistant that analyzes user-reported symptom data and applies decision logic to generate structured, data-driven health guidance — a project that required translating raw inputs into meaningful, interpretable recommendations, the same skill set analysts use to turn business data into decisions. I also developed a responsive e-commerce-style website with product filtering and search functionality, sharpening my ability to organize and surface data for end users through clean UI/UX design.

As a contributor to GirlScript Summer of Code (GSSoC) 2025, I resolved reported issues in live open-source codebases, working directly with project maintainers and mentors. This experience gave me practical fluency in Git/GitHub workflows, code review, and collaborative development standards — skills that translate directly into working cleanly within a data or engineering team. I have also consistently strengthened my analytical thinking by solving data structure and algorithmic problems on LeetCode and Unstop, and I hold certifications in Generative AI (Simplilearn, powered by Google Cloud), Machine Learning Concepts (Microsoft), Python (Sololearn), and professional readiness (TCS iON Career Edge).

I am particularly drawn to [Company Name] because [insert 1 sentence on why this company/role — mission, product, or team you admire]. I am confident that my combination of technical grounding in SQL, Python, and Power BI, real project delivery, and demonstrated collaborative discipline from open-source work make me a strong fit for your data analytics team.

I would welcome the opportunity to discuss how my background can contribute to [Company Name]’s data initiatives. Thank you for considering my application — I look forward to the possibility of speaking further.

Sincerely, Neha nehaduggal9258@gmail.com | +91-8445046752 | linkedin.com/in/neha-duggal-4862252a5 | github.com/nehaduggal09

(Word count: ~410. Replace the [Company Name] and interest-line brackets before sending.)

SECTION 2: Recruiter Outreach Email

Subject: Data Analyst Aspirant — Python, SQL & Power BI | B.Tech AI/ML Student

Hi [Recruiter Name],

I hope you're doing well. I'm Neha, a B.Tech Artificial Intelligence & Machine Learning student, currently building my skill set toward a Data Analyst / Data Analytics role. I wanted to reach out directly in case you're currently hiring or know of opportunities that might be a fit.

A quick snapshot of my background: - Hands-on with SQL, NumPy, Power BI, and MS Excel for data analysis and visualization - Built Medicare, a data-driven health assistant using structured decision logic - Open-source contributor at GirlScript Summer of Code (GSSoC) 2025 — resolved real issues via GitHub workflows - Certified in Generative AI (Simplilearn/Google Cloud) and Machine Learning Concepts (Microsoft) - Active problem solver on LeetCode and Unstoppable for data structures and analytical thinking

I've attached my resume for your reference and would love the chance to speak about how I could contribute to your team's data initiatives. Please let me know if there's a suitable opening or if you could point me to the right person.

Thank you for your time and consideration.

Best regards, Neha +91-8445046752 | nehaduggal9258@gmail.com | linkedin.com/in/neha-duggal-4862252a5 | github.com/nehaduggal09

SECTION 3: Hiring Manager Email

Subject: Application for Data Analyst Role — Neha (B.Tech AI/ML)

Dear [Hiring Manager Name],

I'm reaching out to express genuine interest in the Data Analyst opening on your team at [Company Name]. I came across the role and believe my background in data analysis, visualization, and Python-based problem-solving aligns well with what you're looking for.

I'm currently pursuing a B.Tech in Artificial Intelligence & Machine Learning, and I've used that foundation to go beyond coursework — building Medicare, a health assistant app that turns raw user data into structured guidance through decision logic, and contributing to live open-source projects as part of GirlScript Summer of Code 2025, where I worked directly with maintainers to resolve reported issues.

On the technical side, I work regularly with SQL, NumPy, Power BI, MS Excel, and Jupyter Notebook, and I apply object-oriented Python to keep my code organized and reusable. I also hold certifications in Generative AI, Machine Learning Concepts, and professional readiness training through TCS iON.

I'd welcome the opportunity to discuss how I can contribute to your data function. I've attached my resume, and I'm happy to share my GitHub (github.com/nehaduggal09) or walk through any of my project work directly.

Thank you for your time — I look forward to the possibility of connecting.

Warm regards, Neha nehaduggal9258@gmail.com | +91-8445046752 | linkedin.com/in/neha-duggal-4862252a5

SECTION 4: LinkedIn Connection Request

(Max 300 characters)

Hi [Name], I'm Neha, a B.Tech AI/ML student focused on data analysis (SQL, Python, Power BI). I admire the data work happening at [Company]. I'd love to connect and learn more about your journey and any opportunities on your team. Thank you!

(253 characters — adjust bracketed fields as needed.)

SECTION 5: Referral Request Message

Hi [Name],

Hope you're doing well! I saw that [Company Name] has an opening for a Data Analyst role, and I wanted to reach out because I really admire the work your team is doing.

A quick bit about me — I'm a B.Tech AI & ML student with hands-on experience in SQL, Python, NumPy, and Power BI, and I've built projects like Medicure (a data-driven health assistant) and contributed to open-source through GirlScript Summer of Code 2025. I'm actively looking to apply my analytics skills in a real business setting.

If you feel comfortable, I'd really appreciate a referral or even just a quick introduction to the right person on your team. I've attached my resume for context, and I'm happy to share more about my projects or GitHub if useful.

Thank you so much for considering — I know these asks take a moment of your time, and I genuinely appreciate it either way.

Best, Neha [linkedin.com/in/nehaduggal-4862252a5](https://www.linkedin.com/in/nehaduggal-4862252a5) | github.com/nehaduggal09

SECTION 6: Follow-Up Email

(Send ~5 days after no response)

Subject: Following Up — Data Analyst Application

Hi [Name],

I wanted to briefly follow up on my note from last week regarding the Data Analyst opportunity at [Company Name]. I understand things get busy, so no pressure at all — I just wanted to reaffirm my strong interest in the role.

Since reaching out, I've continued sharpening my analytics skill set — working through SQL and Power BI problem sets and contributing to open-source projects. I remain very enthusiastic about the possibility of joining your team and would be glad to share more about my background whenever convenient for you.

Thank you again for your time and consideration.

Best regards, Neha nehaduggal9258@gmail.com | +91-8445046752

SECTION 7: 30-Second Professional Introduction

(For interviews, networking, career events)

“Hi, I'm Neha — I'm a B.Tech student in Artificial Intelligence & Machine Learning, and I'm focused on building a career in data analytics. On the technical side, I work with SQL, Python, NumPy, and Power BI to explore and visualize data, and I've applied that in projects like Medicure, a smart health assistant that turns symptom data into structured, actionable guidance. I've also contributed to open-source through GirlScript Summer of Code, which gave me real experience with Git workflows and collaborating on live codebases. I'm someone who enjoys taking messy or raw information and turning it into something clear and useful — and I'm looking for a Data Analyst role where I can do that at scale.”

(~110 words, ~30 seconds at natural pace.)

SECTION 8: Top 10 Job Titles Best Suited for Neha’s Profile

1. Data Analyst (Entry-Level / Trainee)
 2. Business Analyst (Junior)
 3. Data Analytics Intern
 4. Junior Data Scientist / Data Science Intern
 5. Reporting & Insights Analyst
 6. Power BI Developer (Junior/Associate)
 7. Python Developer — Data Focus
 8. Machine Learning Intern
 9. SQL Developer / Database Analyst (Junior)
 10. Product Analyst (Entry-Level)
-

SECTION 9: Key Strengths Recruiters Will Notice

- **Full-stack analytics toolkit for an entry-level candidate:** SQL, NumPy, Power BI, and Excel together — most freshers have only one or two of these.
 - **Proof of applied skill, not just coursework:** Medicare and the e-commerce clone show she can take a concept from data/logic to a working, user-facing product.
 - **Real collaborative software experience pre-graduation:** GSSoC 2025 means she’s already worked in a live GitHub codebase with external maintainers — most students her stage haven’t.
 - **Strong OOP and programming fundamentals:** Explicit command of Classes, Inheritance, Polymorphism, Encapsulation, and Abstraction signals CS rigor beyond typical “data analyst” candidates.
 - **Consistent, self-driven upskilling:** Five relevant certifications (Google Cloud-powered GenAI, Microsoft ML, TCS iON professional readiness) show initiative without being told to.
 - **Demonstrated analytical discipline:** Active LeetCode/Unstoppable problem-solving signals she can reason through logic and structure — a proxy for SQL/analytical query thinking.
 - **Full-stack awareness:** HTML/CSS/JS knowledge means she can understand how data surfaces in front-end dashboards and products, not just how it’s queried.
-

SECTION 10: Skill Gap Analysis

Current Strengths - Core data analysis stack: SQL, NumPy, Power BI, MS Excel, Jupyter Notebook - Programming fundamentals: Python, OOP concepts - Foundational front-end: HTML, CSS, JavaScript - Version control & collaboration: Git, GitHub (proven via GSSoC 2025) - Working knowledge of machine learning concepts - Certifications in Generative AI and ML fundamentals

Missing / Underdeveloped Skills (for target Data Analyst roles) - Advanced SQL (window functions, CTEs, query optimization) — resume lists SQL but not depth/level - A second BI/visualization tool exposure beyond Power BI (e.g., Tableau) — good for versatility across employers - Statistics & probability applied specifically to business analytics (A/B testing, hypothesis testing) - Pandas/Matplotlib/Seaborn — currently only NumPy is listed; Pandas is near-universal in analyst job descriptions - Cloud/data warehousing exposure (e.g., basic BigQuery, Snowflake, or Azure familiarity) - A public, analytics-specific portfolio (dashboards, notebooks, case studies) — GitHub currently shows web/health projects, not analytics deliverables - Domain-specific business context (finance, retail, healthcare analytics case studies) to speak to business impact, not just technical output

Recommended Learning Roadmap (next 3–6 months)

1. **Month 1:** Learn Pandas + Matplotlib/Seaborn; redo the Medicare or a new dataset analysis using Pandas instead of only NumPy.
2. **Month 1–2:** Deepen SQL — joins, window functions, subqueries — via a structured course or platform (e.g., Mode Analytics SQL tutorial, HackerRank SQL track).
3. **Month 2:** Build one full, portfolio-ready Power BI dashboard from a public dataset (e.g., sales, healthcare, or e-commerce data) and publish it on GitHub/LinkedIn with a short write-up of the business question it answers.
4. **Month 3:** Take an introductory statistics-for-analytics course covering A/B testing and hypothesis testing — this is one of the most common

analyst interview gaps. 5. **Month 3–4:** Get light exposure to one cloud/warehouse tool (BigQuery free tier or Azure fundamentals) — even a basic project adds real differentiation. 6. **Ongoing:** Convert 2–3 existing or new projects into “case study” format on GitHub/LinkedIn — problem, data, method, insight, business recommendation — so recruiters see analytical storytelling, not just code.

SECTION 11: Personal Brand Summary

Unique Value Proposition Neha combines a formal AI & Machine Learning education with self-driven, applied data work — she doesn’t just learn tools, she builds with them, whether that’s a health-guidance application, a live open-source codebase, or a functioning web product. She brings both the analytical toolkit (SQL, Power BI, Python) and the software collaboration maturity (Git/GitHub, code review) that most entry-level analyst candidates have only one half of.

Professional Positioning Statement “An AI & Machine Learning undergraduate turning raw data into clear, structured insight — equally comfortable writing a SQL query, building a Power BI dashboard, or shipping a data-driven application end to end.”

Recruiter Headline Aspiring Data Analyst | Python · SQL · Power BI · NumPy | Open-Source Contributor (GSSoC 2025) | B.Tech AI & ML Student

SECTION 12: Interview Talking Points

Most Impressive Achievements to Lead With 1. Selection and contribution as an Open Source Contributor at GirlScript Summer of Code 2025 — a competitive, mentor-reviewed program. 2. Building Medicare end-to-end — from raw symptom data to structured, decision-logic-driven guidance. 3. Holding four professional certifications (Generative AI, ML Concepts, Python, TCS iON career readiness) while still in undergrad.

Key Stories to Discuss (use STAR format) - GSSoC Contribution: Pick one specific bug/issue you resolved. Explain the situation (what was broken/reported), your task, the action you took (debugging, GitHub workflow, working with maintainer feedback), and the result (merged fix, what you learned about production-quality code). - **Medicare Project:** Explain the data challenge — turning unstructured, user-reported symptoms into structured, reliable recommendations. Discuss the decision logic you designed and how you validated it made sense, plus the “so what” — improved user awareness of health conditions. - **Website Clone — Filtering/Search Feature:** Frame this as a data-navigation problem: how you thought about helping a user find the right “record” (product) efficiently — this maps directly to how analysts think about filtering/querying real datasets.

Areas Recruiters Are Likely to Ask About — Be Ready - “*You don’t have professional work experience — how do we know you can operate in a real team?*” → Point directly to GSSoC: working with external maintainers, following contribution guidelines, and having code reviewed and merged is real-world collaborative proof. - “*What’s your SQL level — write me a query.*” → Be ready for a live join/filter/aggregate exercise; review SQL fundamentals (GROUP BY, JOIN, WHERE vs. HAVING) before interviews since the resume lists SQL but doesn’t specify depth. - “*Walk me through how you’d analyze a business problem, not just a coding problem.*” → Bridge from Medicare: reframe it as “I took unstructured input, applied logic to structure it, and delivered an actionable output” — the same pattern as business analytics. - “*Why data analytics and not machine learning, since you’re an AI/ML major?*” → Have a clear, honest answer ready — e.g., you enjoy the clarity of turning data into decisions people act on immediately, and analytics is where you can apply your ML foundation practically while building toward more advanced data science work. - “*Do you have experience with Pandas / Tableau / statistics?*” → Be honest about current gaps (per Section 10) but pivot to your learning roadmap and speed of self-directed upskilling (cite your certification history as proof of follow-through).
